

# Beyond BIG Thingergy Case Study

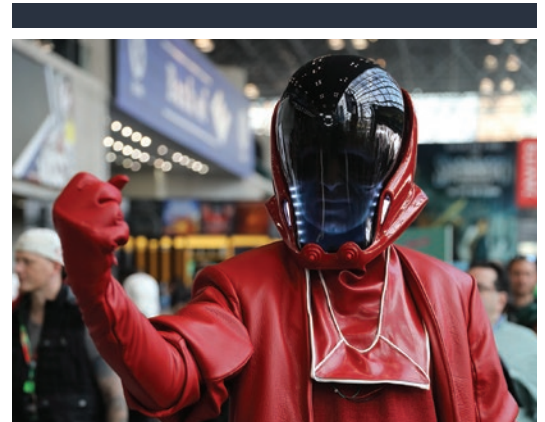

## 3D Printing specialty items for the entertainment industry

Thingergy is utilizing 3DP's large format printers to create specialty costumes, statues & trophies, displays, as well as props for film & television, theme parks, game studios, museums, and toy & collectible companies.

### Why BIG

3DP's workbench boasts a build volume of 1 meter x 1 meter x 0.5 meter, which is essential to Thingergy's production pipeline. Advantages include faster model preparation with less breakdown and keying, and faster post-processing or body shopping of finished prints.

While big prints may increase print time, their ability to print models all at once reduces the extra labor of breaking down digital models, assembling parts and body-shopping those pieces. Ultimately, this entire process results in quicker, overall rate of completion.

Thingergy Inc. is a company specializing in making things for many different facets of the entertainment industry. Some of these things include specialty costumes for film/television, special makeup effects, statues, displays, custom trophies, and props.
